OpenMind Level 2 Student's Book. A1F Training Course: اسطلال 500. OpenMind Project: Expert Teacher Training اسطلال 500.

Course Overview OpenMind is the only true knowledge of language like we can find. You no longer have to struggle with grammar rules because the platform makes the job so easy. It makes learning more fun and you get better results faster. A language teacher can practice her best teaching to students because the accuracy of the results she obtains is higher. OpenMind uses the most advanced technology of speech recognition to convert speech into texts. Accuracy of the results can go as high as 90% while being comfortable for the speaker. The device has been prepared specifically for adult learners, designed to make learning a real pleasure. The device can be used individually or with other similar devices. This course includes: - 48 lessons in PDF. - Audio recordings of the lessons. - 4 exercises. - 4 practical tests. - 2 games. - 3 warm up exercises with 1-minute. - 5 story generation exercises. - 2 exercises on the main exercises of the level. - A coupon for faster access to the teacher. - 24 hours of access to the teacher. - 2 certificates. Who is the target audience? The target audience is adult learners who want to improve their reading and writing. OpenMind can also be used with children, teenagers or adults who are preparing for a specific test or for exams. OpenMind is suitable for adults of all levels who want to improve the accuracy and the speed of their reading. Can I take the OpenMind course individually? Yes. The OpenMind course is structured in such a way that learners can practice at their own pace. OpenMind should be taken in small sessions of 30 minutes at a time, because the course is structured in 48 lessons. Can I go faster than a normal session of 30 minutes? Yes. OpenMind offers two types of sessions. - You can follow the instructor and take full advantage of his knowledge. - You can practice from a personal device. What will I learn from the course? OpenMind uses speech recognition technology to convert speech into texts. The technology is very accurate and can be used with any device, meaning that OpenMind can be used individually or with other learning devices. For the course, OpenMind provides students with a series of exercises and sentences that can be

I had been hearing about Bitcoin for years, as it was a highly-sought-after virtual currency with a revolutionary concept: there was no centralized, central authority that could “lose” your money. If you held enough of the currency, it was yours, and would not go away if some massive corporation decided to shut down the whole thing — a truly unique concept. However, I wanted to make sure I was actually going to invest in it, and ask myself “Are there any projects that are launching soon, that could gain quick adoption?” Enter GridConnect, an amazing grassroots campaign to build free, clean energy — I’ve seen a lot of buzz about it, and it has been working in Kenya for the past few months. Have you had any chance to check it out yet? You should. It does some pretty amazing things. So what’s exactly happening in this “social energy” movement? In a

nutshell, GridConnect is actively fighting the limitations and centralized control in conventional power grids. For the past two years, they've built a completely open mesh network that connects people who want to buy and sell excess renewable energy. The GridConnect system is open to anyone, and they are currently operating in 4 African countries, and have plans for more. When a customer pays GridConnect, they get paid in Zimbabwean dollars, and there are always people who have a surplus of electricity that will give someone in need of power in neighboring countries. Unfortunately, the conventional power grid is a giant tangled web that has major issues. It works well for cities, but not for remote villages, and it often forces customers to pay for the privilege of using the grid. GridConnect is decentralizing the system, using unused solar panels and batteries in each of its customers homes, to produce and share excess power with other people who need energy. With the help of a localized, open grid, they expect to be able to alleviate energy
